MRVL — Full Analysis

Date: 2026-06-03 **Company:** Marvell Technology, Inc. — semiconductor fabless; custom silicon for hyperscalers, optical networking, AI accelerator components · Mcap $263.9B · Sector Technology · Sub-tag AI Factory / Data Center Networking **Earnings:** 2026-08-27 (85 days out — LOW near-term risk)

Critical context

MRVL is in the middle of a parabolic move. Up **+61% in 8 trading sessions** ($186.80 on 5/20 → $301.65 today). Two massive unfilled gaps just opened — 6/2 gap of **+15.51%** and 6/3 gap of **+9.23%**. This is news-catalyst driven (no earnings imminent) but the news server has zero articles.

Price / structure — extreme extension

Metric	Value	Read
Price	$301.65	All-time high territory
20-day BB	lower $120.36 / mid $196.14 / upper $271.92	bb_pos 1.196 — **10.9% above upper band**
VWAP(20)	$219.29 (**+37.56% above**)	**45 consecutive bars above VWAP**
Major unfilled gaps	6/2 $219.43–$253.46 (–21.6% below current); 6/3 $290.79–$317.63 (just below current)	Twin gravitational targets
Higher lows (1h)	None — uptrend structure (not bounce structure)	—

Momentum — deeply overbought

Indicator	Reading	Signal
RSI(14)	**86.9**	Deeply overbought (>85 is rare)
MACD	macd 28.82, signal 19.16, **hist +9.66**	Bullish, expanding (parabolic)
Stochastic	K 86.02 / D 92.38, **bearish crossover**	Overbought, top forming
Candlestick	Long-legged doji 5/29	Indecision (pre-rally)

Volume

- Yesterday (6/3): **113.8M shares, 2.98× avg**

- 5/27: bearish capitulation flagged (2.13× vol)
- 6/2: **bullish exhaustion** flagged (3.35× vol, +32% bar)
- OBV rising **+44% in 5 sessions** — real accumulation confirmed
- Dark pool: 1 "two-sided institutional flow" event 6/3 (large blocks both ways)
- Bid/ask: H/L range 1.30× norm — elevated; daily ranges 10–14% (extreme intraday vol)

Options positioning — institutional bullish flow

51 unusual call sweeps detected across June expirations. Top conviction:

Strike	Exp	Volume	Vol/OI	OTM %	Conviction
$320	Jun 5	**22,667**	new (OI 0)	+6.1%	high
$320	Jun 12	6,893	new	+6.1%	high
$320	Jun 18	5,258	new	+6.1%	high
$310	Jun 5	10,659	new	+2.8%	moderate
$310	Jun 12	2,692	new	+2.8%	moderate
$310	Jun 18	1,322	new	+2.8%	moderate
$300	Jun 5	9,526	new	ATM	low

Vol/OI ratios are misleading (OI=0 because contracts are newly opened) but the *absolute* call volume is enormous. The $320 strike is the next thesis target (+6.1%). DAOI net +85 (essentially zero) — chain too fresh for hedging to have settled.

Volume P/C 0.49 = ~2:1 call buying vs put buying. **IV rank 0%** = puts unusually cheap (the options market is pricing low realized vol going forward — complacency or expectation of continued grind higher).

Relative strength — market leader by huge margin

Period	MRVL	SPY	XLK	Excess vs SPY
1m	**+84.32%**	+5.05%	+21.09%	+79.27 pp
3m	**+286.48%**	+10.39%	+40.50%	+276.09 pp
6m	+231.52%	+11.50%	+37.43%	+220.02 pp
12m	**+392.05%**	+28.71%	+69.44%	+363.34 pp

RS label: **market leader** · sector_leading. Among the strongest 12-month performers of any liquid name.

Fundamentals — solid + accelerating

Metric	Value	Score
Composite	**+7 (solid)**	✓

Metric	Value	Score
Revenue 3y CAGR	+11.4%	+1
Revenue acceleration	**+37.4%**	+1
Op margin 3y	0.7% (thin)	0
Op margin trend	**+23.5% expanding**	+1
FCF margin 3y	**30.4% strong**	+2
Valuation (EV/Sales)	rich	0
12-1 momentum	**+171%**	+2

Quarterly revenue: $1.89B → $2.01B → $2.07B → $2.22B → **$2.42B (+9% QoQ)** — clean acceleration through Q1 FY27.

Net income volatile: $178M → $195M → **$1,901M (one-time)** → $396M → $35M. Last print weak but likely one-time items.

Macro / squeeze

- Short interest **4.31% float, 1.24 days-to-cover** → LOW squeeze risk
- News: 0 articles in 7-day window (coverage gap)
- Drawdown profile: max 1-day –18.59%, max 5-day –18%, max intraday yesterday –13.34% — this is a high-vol name

Trade engine

SKIP, HOLD, LOW confidence, net_score –1 (9 bull / 10 bear)

- Bull: solid fundamentals, market leader RS, strong call sweeps, MACD bullish, news positive
- Bear: RSI 86.9 deeply overbought, BB pos 1.20 above band, stochastic overbought, volume exhaustion top, MM sell_on_rally, mixed signals

Engine correctly identifies **no clean directional edge** — everything is extreme on both sides.

Bull vs bear ledger

Bull case

- OBV strong confirmation (rising 44% in 5d)
- 51 unusual calls, 3 high-conviction at $320
- Volume 2.98× avg on 6/3 (real demand)
- Fundamentals +7 solid, accelerating
- Revenue +9% QoQ to $2.42B
- RS +392% vs SPY 12m — top tier

- Sector leading (XLK +69%)
- Earnings 85d out — no IV crush near-term
- Mcap $264B — institutional-grade liquidity

Bear case

- RSI 86.9 (extreme overbought)
- Stochastic bearish crossover at 86/92
- BB pos 1.20 (+11% above upper band)
- Bullish exhaustion bar 6/2 (3.35× vol)
- VWAP +37.6% above — extreme extension
- Two unfilled gaps below (gravity to $219)
- DAOI sell_on_rally (mechanical resistance)
- EPS acceleration decelerating
- News server coverage gap (catalyst unknown)
- Net income volatility (recent print weak)

Verdict by holding state

If long from sub-$200

This is the textbook **take-profits-aggressively** moment per the IMSR Rule 4. Every entry-quality dimension has inverted: BB extended, stoch maxed, MM sell_on_rally, vol exhaustion bar fired, VWAP 38% below. Book at least 75% here. Hold ≤25% with tight trailing stop at $271 (upper BB / first technical support).

If long from $200–$280

Take half. Trail remainder with stop at $271.

If flat

Do not chase at $301.65. This is the worst possible entry. R/R is asymmetric to the downside. Two unfilled gaps below ($253 and $219) are statistical magnets.

If you want to play the reversion (bear thesis)

IV rank 0% means puts are unusually cheap — premium math actually works here (unlike IMSR yesterday at IV 210%). Reasonable structures:

Trade	Approx structure	Thesis
Aug 21 $290/$250 bear put spread	Debit ~$10, max profit $30, RR 3:1	Targets the 6/2 unfilled gap fill before earnings
Jun 18 $295/$270 bear put spread	Debit ~$5, max profit $20, RR 4:1	Faster reversion play; expires before earnings

Trade	Approx structure	Thesis
Stock short with stop $320	Risk 6.1% to gain 27% to gap target	Direct bet on gap fill, defined risk

All three benefit from the cheap IV. **Risk:** if the catalyst is real (e.g., AWS custom silicon contract win, hyperscaler partnership), MRVL can grind higher for weeks before reverting.

Calibration applied from IMSR sequence

The 5/26 IMSR sequence taught five rules. Applying them here:

1. **Rule 1 (DAOI alone isn't a bail trigger):** N/A — DAOI is degenerate at $85 net (new chain)
2. **Rule 2 (VWAP + OBV is the truth signal):** Both screaming bullish — the move is real, not technical noise. Trend confirmed.
3. **Rule 3 (Don't wait for pullback when smart money flow is confirmed):** *This rule warns AGAINST a short trade here.* Smart money is heavy on calls; fighting that with shorts is exactly what Rule 3 says not to do for the long side. Apply symmetrically.
4. **Rule 4 (Take profits when 4+ quality dimensions invert):** For longs, this rule fires loudly. Book.
5. **Rule 5 (Contrarian options scorer flags; trend confirms):** `analyze_options_symbol` flagged MRVL as put_score 6 ("above upper BB +10.9%; IV rank 0% — puts cheap"). The contrarian signal is real. But Rule 5 says require trend confirmation before sizing in — and the trend is **STILL UP** (MACD hist +9.66, OBV ripping). So **don't short yet**.

Bottom-line recommendation

Watch, don't trade. This is a great study but a bad trade in either direction right now:

- Long-side R/R is poor (chase entry into extension)
- Short-side fights the smart-money flow (Rule 5 says wait for trend signal to confirm)

Trigger to act

- **Long entry:** pullback to $246 (trailing stop level / SMA20 area) with stochastic K back under 50 + bullish hammer
- **Short entry:** close < $290 (6/3 gap bottom) on volume > 80M + MACD histogram inflects negative + stochastic loses 80

Either trigger gives a defensible entry. Today's price ($301.65) gives neither.

Caveats

- News server returned 0 articles in 7d — catalyst behind +61% rally is not visible in the data
- DAOI net +85 is effectively zero because chain OI hasn't built up; will become meaningful in a few days
- This is research output from a personal dashboard, **not financial advice**

- A clean reversion to VWAP ($219) implies a –27.4% move — that's a real risk if a single bad session triggers profit-taking
